Global Enterprise IT Handbook: Remote Work Security Protocol

Document: HR-IT-GUIDE-2026 | Version: 4.1 | Standard: ISO/IEC 27001 Certified

1. Purpose & Remote Work Philosophy

Enterprise embraces hybrid and flexible remote work while upholding our commitment to data privacy, client trust, and infrastructure integrity under corporate security policy. This guide details standard operating expectations for all home office environments and remote employee devices.

Standard Operating Core Expectations: • Connect to corporate Virtual Private Network (VPN) using managed client. • Authenticate via hardware FIDO2 key or approved authenticator push notification. • Never conduct corporate business or transmit proprietary data across unsecured public Wi-Fi. • Maintain strict physical workstation security and screen lock policies.

2. Secure Network Access & VPN Operations

• **Client Software**: Connect exclusively using the pre-configured GlobalProtect client on your managed laptop.

• **Corporate Portal Gateway**: The standard corporate portal URL is: https://vpn.internal.lan

• **Authentication Flow**: Single sign-on requires hardware FIDO2 key or Microsoft Authenticator number matching.

• **Split-Tunneling Policy**: All corporate application traffic is inspected through cloud access security brokers.

3. Workstation Maintenance & IT Support Channels

• **Patch Management**: Operating system and security updates apply automatically during the 02:00 AM local window.

• **Application Restrictions**: Do not install unapproved software, torrent clients, or unauthorized browser extensions.

• **Clean Desk Policy**: Always lock screens (Windows Key + L) when leaving your workspace unattended.

Official Technical Support Contact Channels:

• Self-Service Portal: https://helpdesk.internal.lan

• Support Email: it-support@internal.lan

• 24/7 Global Follow-the-Sun Support Hotline: Extension 4357 (HELP)

Triage Assessment: SAFE / BENIGN POLICY DOCUMENT (No Threats Detected)
